Mary Lou Eastman, Director

FOREWORD

What is basic to the preparation of a good annual vital records statistical report? What is required of vital records for their "other" use? The very basis for both uses is the accurate, complete source documents which have been filed on time.

1980 was a census year, and it was disclosed that the population of Nebraska had increased 86,215 from 1,483,791 since the census was taken in 1970. However, the natural increase of births over deaths was 99,429 for the same time period.

Have you any idea of the number of persons in Nebraska, outside of the Bureau of Vital Statistics, who are involved by statutory requirement in the relatively simple registration system? Physicians are responsible for filing the birth certificates. With 99.7% of the babies being born in hospitals, many of the medical records personnel prepare the certificates for the signature of the physician. There is a divided responsibility for filing the death certificates. The attending physician or county attorney must certify the cause of death, with the funeral director obtaining the personal history information and filing the record. The county judges file the marriage records. The clerks of the district courts file the dissolution of marriage certificates. The birth and death registration involves a county registrar for each county. All of these who are statutorily responsible total approximately 3,400 persons. The persons working with vital records in the various offices would undoubtedly double the number involved in registration.

During 1980 an additional 64,748 new certificates were filed, bringing the grand total to 4,600,000. While it has taken 76 years to accumulate these, over 104,000 certified copies were needed during the year.

Nebraska's vital records registration is good. To each and every one of you who has had a part in it, know you are appreciated. Without your faithful cooperation throughout the year, reliable statistical tabulations would have been impossible.

Freda Theis, Director
Bureau of Vital Statistics

INTRODUCTION

The information presented in this report is drawn from the vital records of the State of Nebraska. The primary period covered is calendar year 1980, but selected data from previous years are also included. Data from 1980 records received after April 1, 1981 by the Bureau of Vital Statistics are not included in the tabulations in this report. However, the number of such records is minimal and their statistical effect negligible.

The congenital anomaly data presented in the report are taken from the Nebraska Birth Defects Registry, with the exception of the death data. Information for the Registry is provided by reporting personnel in approximately 100 Nebraska hospitals.

The state population figure used in the calculation of rates is 1,570,006, the published 1980 Census total. County, city and balance of county populations used are also 1980 Census figures. United States vital event data presented for comparative purposes is provisional. In particular, the provisional U.S. rates for 1980 may be higher than the final rates published in the future because the 1980 Census population was higher than the estimated population which was being used when provisional rates were published.

Characteristics of the population, such as its size and its age structure, can bear a great influence on vital statistics data. Only 30 of the 93 Nebraska counties, according to the 1980 Census, had populations over 10,000 along with only 12 cities. Nine counties had less than 1,000 residents. In any area with a population under 10,000, wide variations in numbers or rates of events can appear from year to year, and no single year may be truly representative of the population. Counties with a high proportion of young people will show relatively higher birth rates and lower death rates than counties with greater numbers of older residents.

Starting in 1979 the Ninth Revision of the International Classification of Diseases was used in the classification of cause of death. Where data prior to 1979 is presented, when the 8th Revision of the ICD was used for classification, it is as comparable as possible to the current data.

NEBRASKA BIRTHS, DEATHS, MARRIAGES AND DIVORCES

BY NUMBER AND RATE PER 1000 ESTIMATED POPULATION

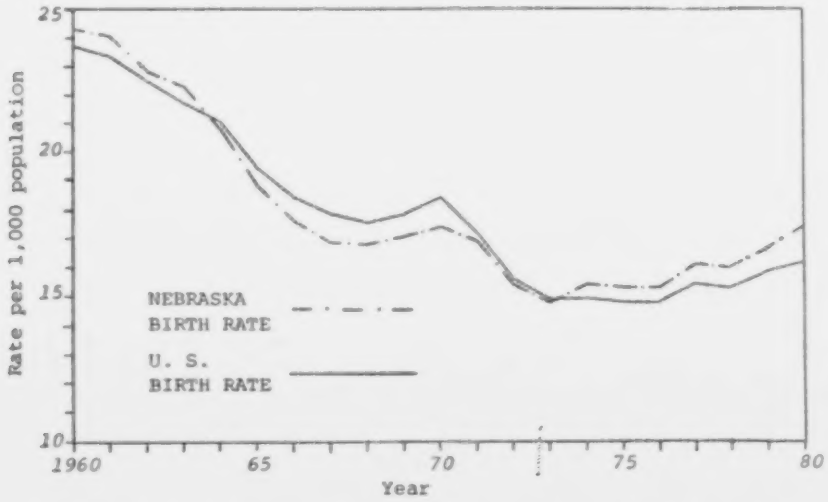
BIRTH OVERVIEW

Nebraska resident live births continued upward from their 1979 level of 26,199 to 27,335 in 1980. This represents a substantial increase of 4.3%. The number is the largest it has been since 1965, while the rate of 17.4 per 1,000 population is the highest it has been since 1970, when it also stood at 17.4. The rate increased more than the United States rate which rose in 1980 to 16.2 from 15.8 in 1979. The increase is principally a result of a larger number of persons in their prime childbearing years. A comparison of Nebraska and United States rates for a twenty year period is shown in the graph below. Though Nebraska's rates have been both higher and lower than the national rates, they tend to follow the same over-all trends.



Rates for counties within the State ranged from the high of 25.9 in Thurston County to a low of 11.5 in Dundy County. Rates for towns over 2,500 population ranged from Plattsmouth's high of 23.5 to Minden's low of 9.2.

It is notable that while the crude birth rate for the state was the same in 1970 and 1980, 17.4, the fertility rate in 1980 was 77.3 per 1,000 women 15-44 years of age but was 87.4 in 1970. This is an 11.6% drop in fertility rate over the ten year period. Nebraska's 1980 fertility rate is higher than the United States rate of 69.2. The following table shows age specific fertility rates for 1960, 1970 and 1980.

AGE SPECIFIC FERTILITY RATES

AGE	1960	1970	1980
15-19	100.8	53.5	45.0
20-24	291.8	173.2	128.1
25-29	218.2	159.1	139.3
30-34	120.2	75.8	71.9
35-39	61.4	30.4	19.7
40-44	17.5	9.1	3.8

It is interesting that while the fertility rate continued to drop for every age group between 1970 and 1980, very little decline occurred in the 30-34 age group. This and the fact that 14.4% of the 30-34 age group were having their first child and 75.1% of them were having their first, second or third child in 1980, while in 1970 only 8.1% of the age group was having their first child and only 44.1% were having their first, second or third child lends support to the idea that delayed childbearing has been taking place. Of course, the ultimate result of these occurrences is reduced family size.

Nearly all births in Nebraska continue to occur in hospitals and are attended by physicians. In 1980 only 95 births (0.3%) were not reported as occurring in hospitals. The percentage of births not reported as physician attended is small, but appears to be growing. It was 0.3% in 1978, 0.6% in 1979 and 1.0% in 1980. The distribution of births by race shows white births continue to account for a decreasing percentage. In 1980, 90.2% of births were white compared to 90.4%, 92.5% and 93.5% in 1979, 1975 and 1970 respectively. Black births account for 4.7% of the total, American Indian 1.2%, Mexican-American 2.8% and all other races 0.9%. Douglas County has the largest share, 52.4% of the nonwhite births, with Lancaster County next at 9.2%.

Out-of-wedlock births continued a steep upward climb showing an 11.1% increase in 1980 over 1979. The rate of out-of-wedlock births is not increasing as rapidly as the numbers, however. The rate increased 6.4% from 108.4 in 1979 to 115.8 in 1980. This compares to the 4.8% increase in rate for all births. White births accounted for an increased share of out-of-wedlock births. Within race groups, the percentage of all black and Mexican births which were out-of-wedlock decreased and those for white, Indian and other races increased. These percentages by race follow.

	PERCENT OF OUT-OF-WEDLOCK BY RACE		PERCENT OF RACE OUT-OF-WEDLOCK	
	1980	1979	1980	1979
White	68.5	66.2	8.8	7.9
Black	22.7	24.4	56.1	57.8
Indian	4.3	4.7	40.5	39.0
Mexican	4.1	4.3	16.2	16.9
All Other	0.3	0.3	4.3	3.7

The distribution of out-of-wedlock births by age group shows that teenagers continue to account for the largest share of these births. In 1980 teenagers also accounted for a larger percentage of both out-of-wedlock and all births than in 1979 which is a reversal of what had been occurring over the last few years. The percent distributions by age group of mother for out-of-wedlock births and all births are given in the following table.

OUT-OF-WEDLOCK BIRTHS

AGE	1976	1977	1978	1979	1980
Under 20	52.6	50.3	47.2	43.5	45.6
20 - 24	32.7	33.2	35.2	38.1	36.1
25 - 29	9.9	10.9	11.8	12.5	12.3
30 and over	4.9	5.6	5.8	5.9	5.9

ALL BIRTHS

AGE	1976	1977	1978	1979	1980
Under 20	13.7	13.0	12.4	11.6	12.1
20 - 24	37.1	35.9	35.1	34.9	34.8
25 - 29	33.9	34.4	34.8	35.2	34.4
30 and over	15.5	16.6	17.6	18.3	18.8

The table on all births shows several changes for 1980. This is the first time since 1972 that the Under 20 group accounted for an increased rather than a decreased percentage of all births. The downward trend in percentage for the 20-24 group also slowed substantially. The 25-29 group's percentage dropped instead of increased for the first time since 1970. The 30 and Over group continued to increase its percentage, but not as fast as it has been. The average age of mothers for first order births also changed direction slightly while 2nd and 3rd order

births continued to increase as shown in the table below.

AVERAGE AGE OF MOTHER

	1970	1975	1979	1980
1st born	21.4	22.1	22.8	22.7
2nd born	24.2	24.7	25.3	25.4
3rd born	26.8	27.3	27.5	27.6

Evidence of delayed child bearing continues to show when looking at the average birth order of children for each mother's age. The table below shows the age range of mothers where given birth order averages have occurred.

MOTHER'S AGE RANGE FOR BIRTH ORDER AVERAGES BY YEAR

	1.00 - 1.99	2.00 - 2.99	3.00 - 3.99	4.00 - 4.99	5.00+
1970	13 - 23	24 - 27	28 - 31	32 - 36	37+
1975	12 - 25	26 - 31	32 - 34	35 - 38	39+
1979	14 - 25	26 - 31	32 - 36	37 - 40	41+
1980	13 - 25	26 - 32	33 - 37	38 - 41	42+

The average number of children per family having children in 1980 remained at 2.3. The percent of births which were low-weight remained at 5.6% in 1980. Prenatal care began in the first trimester in 79.0% of the births, up from 77.6% last year and the percent of mothers who had at least ten prenatal visits rose to 64.6%.

There were 700 Nebraska resident births on which congenital anomalies were reported to the Birth Defects Registry for 1980. This figure represents 2.5% of the 27,568 live births and fetal deaths, a slight increase over the 2.4% reported in 1979.

Of the 700 cases, 20.4% weighed under 5½ pounds, compared to the 5.6% for all births. Twenty-two cases were stillborn, accounting for 9.4% of the 233 fetal deaths. Only one defect was reported on 560 of the cases, while 81 had two, 30 had three, 15 had four, and 14 had five or more anomalies noted.

Nebraska births in 1980 occurred at a rate of one every 19.3 minutes, or 74.7 per day. More births occurred in July (2,490) than in any other month while the month with the fewest births was April (2,125). Jennifer regained its position as being the most popular girl's name after a two-year drop from that position. Michael remained the most popular boy's name for the third year in a row.

Out-of-State: A Nebraska resident giving birth or dying in another State.
Non-Resident: A non-Nebraska resident giving birth or dying in Nebraska.

DEATH OVERVIEW

An increase of 1.7% in the number of Nebraska resident deaths, from 14,228 in 1979 to 14,465 brought the crude death rate back up to 9.2 per 1,000 population. This is the same level as 1977 and 1978, while the 1979 rate had dropped to 9.0. The rate continues to be higher than the United States rate, but the U.S. rate also rose in 1980 to 8.9 from 8.7 in 1979.

Within the state, county death rates ranged from a high of 18.5 in Dundy County to a low of 3.4 in Sarpy County. Rates for towns over 2,500 population ranged from a high of 25.5 in David City to a 2.5 low in LaVista. For LaVista, this is a continuation of their 1970's trend into the 1980's. Their relatively young population is the primary factor in this dominance of the low death rate position.

The Ninth Revision of the International Classification of Disease was used to assign codes for cause of death starting in 1979. Therefore, most of the data shown in this report is comparably coded. However, since the Eighth Revision was used prior to that time, caution should be taken to consider comparability of coding schemes if some unusual condition appears to be present over several years.

The ten leading causes of death did not change between 1979 and 1980. While the majority of them increased in number to varying degrees, the total percentage of deaths for which these causes account decreased slightly to 84.5% in 1980 from 84.8% in 1979.

The leading cause of death, heart disease, increased very little in number, 0.2%. The rate also increased and though it continues to be higher than the United States rate, the two rates are much closer than they have been in the past because of a large increase nationally.

Cancer, the second most frequent cause of death, increased both in number and rate. The national rate also increased. The most common site, bronchus and lung, showed a slight decrease in number, but the percentage accounted for by females is continuing its gradual increase and is now 25.1%, up from 21.3% in 1975. The second most common

site, the large intestine also showed a decrease. However, the breast, the third most common site, showed a disturbing increase. The rate is the highest it has been since 1972. Death rates per 100,000 population for heart disease and cancer in Nebraska and the United States are shown in the following table.

	HEART DISEASE		CANCER	
YEAR	NEBRASKA	UNITED STATES	NEBRASKA	UNITED STATES
1971	385.5	360.5	176.4	163.6
1972	389.5	363.0	182.7	166.0
1973	368.3	360.8	172.4	167.3
1974	370.4	351.6	172.3	169.4
1975	356.7	338.6	179.1	174.4
1976	352.9	338.5	169.9	174.9
1977	337.9	331.6	182.0	178.4
1978	348.4	333.0	188.2	181.9
1979	348.2	330.2	184.0	183.9
1980	349.8	342.3	188.0	186.3

Both in Nebraska and the United States, cerebrovascular disease is the third ranking cause of death. The number and rate both continued a slow and steady decline which has been evidenced for several years. Nebraska's rate of 92.4, however, continues to be much above the national rate of 76.2. The primary reason for this difference is that Nebraska has a higher proportion of its population in older age groups and therefore has more people at risk.

Accidents, the fourth leading cause of death, increased by 4.4% in 1980 and the rate rose to 51.0 from 48.7 in 1979. Motor vehicle accidents accounted totally for this increase since all other categories of accidental deaths decreased. Motor vehicle traffic deaths increased by 18.7%.

Accidents are the leading cause of death for both men and women under 40 with the exception of the 30-34 age group of women where cancer is the leading cause. At age 40, heart disease becomes the leading cause of death for men. Cancer is the top cause for women 40-64 at which point heart disease takes the lead position for women also. Previously heart disease had not taken the lead for women until age 70.

The average age at time of death decreased slightly for the first time since 1970 to 70.7 years from 70.9 years in 1979. It also decreased for both men and women. The female average dropped from 74.6 to 74.3; the male average from 67.9 to 67.6. The

oldest Nebraskans dying in 1980 were a man and woman age 108. A total of 56 persons, 14 males and 42 females, died at the age of 100 or more years. One Nebraskan died every 36 minutes, or 40 per day in 1980. January was the month in which the most deaths occurred, and September the month with the least.

MATERNAL, INFANT, AND FETAL DEATHS

There was only one Nebraska resident maternal death in 1980, while two had been recorded in each of the two years prior. The maternal death rate dropped to 3.7 per 100,000 live births. The death was attributed to fetal-maternal hemorrhage.

Infant deaths increased in 1980 after the sharp decrease which occurred in 1979. However, the rate decreased slightly to 11.5 per 1,000 live births from 11.6 in 1979 so downward progress was still made in spite of the 3.3% increase in number from 304 in 1979 to 314 in 1980. The Nebraska infant death rate remains lower than the United States rate, which dropped to 12.5 in 1980. A comparison of the state and national rates is shown in the table below.

YEAR	NEBRASKA NUMBER	NEBRASKA RATE	UNITED STATES RATE
1976	337	14.2	15.1
1977	317	12.6	14.0
1978	326	13.0	13.6
1979	304	11.6	13.0
1980	314	11.5	12.5

The infant death rate for whites decreased to 10.9 from 11.1, while the nonwhite rate dropped from 18.5 to 17.2.

Neonatal deaths, those occurring in the first 27 days of life, declined by two and accounted for 65.6% of the total infant deaths. The rate decreased from 7.9 to 7.5 per 1,000 live births. The national neonatal death rate also showed a decrease to 8.4.

Fetal deaths increased in number over 1979 but the rate did not increase because of the larger number of births. There was a 4.5% increase in number of resident fetal deaths, 233 compared to 223 in 1979. The rate remained the same at 8.5 per 1,000 live births.

MARRIAGE AND DIVORCE OVERVIEW

Nebraska marriages increased by 1.2% in 1980 to 14,239, bringing the rate per 1,000 population to 9.1, the highest it has been since 1973 when it also stood at 9.1. The U.S. rate for 1980 also increased to 10.9 and equalled its 1973 level.

Traditionally, county marriage rates have been calculated based on the number of marriages occurring in a county per 1,000 population. This data is presented in the report, but it also includes a table where rates show the number of county residents married in 1980 per 1,000 population. In 1980, resident county marriage rates varied from a low of 6.5 in Sioux County to a high of 27.3 in Arthur County. The state resident marriage rate increased to 17.8 from 17.6 in 1979

Nineteen was the most frequently reported age of brides for first marriages as well as all marriages. For grooms, the most frequent age for first marriages was 21, and 22 for all marriages.

After having broken the pattern in 1979, the percent of marriages which were the first for both the bride and groom once again decreased, from 63.9% of all marriages to 63.5% in 1980. Marriages which were the first for neither also decreased to 17.8% from 18.3%. The following table shows what has been happening over the last five years.

YEAR	FIRST MARRIAGE FOR BOTH PARTNERS	PERCENT OF ALL MARRIAGES
1976	8,615	64.1
1977	8,506	63.5
1978	8,657	63.1
1979	8,991	63.9
1980	9,042	63.5

Residents from several foreign countries and all states except Connecticut and Vermont were married in Nebraska in 1980. Both the bride and groom were Nebraska residents in 89.2% of the marriages; neither were residents in 4.0%.

Most marriage ceremonies were religious, 81.3%, rather than civil. In marriages

which were first marriages for both the bride and groom the percent of religious ceremonies was higher at 88.4%. June and August were the most popular months for 1980 marriages, each with 1,894 taking place. The fewest marriages in any month, 649, occurred in January.

Nebraska divorces increased in both number and rate to record highs of 6,368 and 4.1 per 1,000 population, while the U.S. rate remained at 5.3 in 1980.

The most frequent age of those divorced in 1979 was 24 for women and 25 for men. More marriages continue to end after a duration of two years than any other length of time, with 37.8% of the divorces occurring prior to five years of marriage. Couples married from five to nine years accounted for 28.1% of the divorces and those married ten or more years 34.0%. This distribution has changed only slightly for many years.

Of all divorces, 67.6% of them were ending first marriages for both partners, down slightly from 68.6% in 1979. The first marriage was ending for neither partner in 15.2% of divorces, up from 14.3% in 1978.

Data on settlements show that in 89.7% of the divorces, alimony, child support, property settlement, or some combination of three was granted, increasing somewhat over 1979. Child support was granted in 81.4% of the 3,986 divorces in which children under 18 were affected.

POPULATION OVERVIEW

The 1980 Census placed the population of Nebraska at 1,570,006, an increase of 5.7% in the last decade.

The table below shows natural increase (the excess of births over deaths) and net migration for Nebraska for each decade since 1930.

DECADE	NATURAL INCREASE	NET MIGRATION
1930-1940	112,471	-174,600
1940-1950	139,270	-129,594
1950-1960	201,518	-115,698
1960-1970	147,200	- 73,197
1970-1980	97,420	- 12,747

Although Nebraska continues to experience out-migration, there has been a consistent decrease in the past decades. And though natural increase has declined markedly since the 1950's, the accompanying decrease in net out-migration has offset it to produce steady population growth.

Nebraska population projections are available from the State Policy Research Office. Annual county-level estimates for Nebraska are made by and may be obtained from the Bureau of Business Research, University of Nebraska Lincoln.

DEFINITIONS

BIRTHS

BIRTH ORDER - The number of live born children including the current birth.

BIRTH RATE - The number of live births per 1,000 population.

FERTILITY RATE - The number of live births per 1,000 females 15-44 years of age.

LENGTH OF PREGNANCY - The duration of gestation, in completed weeks, as calculated from the first day of the last normal menses to the date of birth.

LIVE BIRTH - The complete expulsion or extraction of a product of conception from its mother, irrespective of the period of gestation, which, after such separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached and is reportable.

LOW-WEIGHT BIRTH - A live born infant weighing 5½ pounds or less.

OUT-OF-WEDLOCK BIRTH RATE - The number of out-of-wedlock births per 1,000 live births.

SEX RATIO - The number of male births for each 1,000 female births.

DEATHS

DEATH RATE - The number of deaths from all causes per 1,000 population.

FETAL DEATH - Death prior to the complete expulsion or extraction of a product of conception from its mother, irrespective of the duration of pregnancy. Until the pregnancy has reached 20 weeks duration, it is not required that such a death be reported.

FETAL DEATH RATE - The number of fetal deaths per 1,000 live births.

INFANT DEATH - Death of a person under age one year.

INFANT DEATH RATE - The number of infant deaths per 1,000 live births.

MATERNAL DEATH - Death attributable to delivery or the complications of pregnancy, childbirth or the puerperium.

MATERNAL DEATH RATE - The number of maternal deaths per 100,000 live births.

NEONATAL DEATH - Death of a person under 28 days of age.

NEONATAL DEATH RATE - The number of neonatal deaths per 1,000 live births.

PERINATAL DEATHS - Fetal deaths plus neonatal deaths.

PERINATAL DEATH RATE - The number of perinatal deaths per 1,000 live births plus fetal deaths.

RESIDENCE - A person's usual place of abode. This means, in general, the place where one lives and sleeps most of the time. However, when usual residence is in a nursing home or other institution, residence is considered the place where the person lived prior to admission to the institution.

OCCURRENCE - The location in which an event takes place irrespective of the usual residence of persons involved.
